WATER SHUTOFF VALVE LOCATION

In an attempt to minimize damage to your and/or neighboring units if a water pipe breaks or a water leak of any kind occurs, it is extremely important that you know where to shut off the water supply to your unit.

Shutoff valves are located on the wall in the garage near the Hot Water Tank. (See photos below)

2 BEDROOM UNITS

In the 2 Bedroom units the shut-off valve is usually located on the wall between the Hot Water Tank and the Back Door.

3 BEDROOM UNITS

In the 3 Bedroom units the shut-off valve is usually located on the wall just forward of the Hot Water Tank.

ADA UNITS

In the ADA units the shut-off valve is located in the garage storage room on the wall between the Hot Water Tank and the door opening.

Water is OFF when handle is perpendicular to pipe.

Water is ON when handle is in-line with the pipe.
